<b>Reviewed by</b>	S. Leray, O. Napoly, M-A. Maynard	CEA	23 November 2017
<b>Approved by</b>	Steering Committee		30 November 2017

**Deliverable:**

Public website with searchable databases and communication tools

**Executive summary:**

*The AMICI public website is provided by the Information Technology infrastructure of the Henryk Niewodniczanski Institute of Nuclear Physics, Polish Academy of Sciences (IFJ PAN, Poland). The domain <http://eu-amici.eu> was registered on 16th of January 2017 and it is paid until 16th of January 2020. The web hosting period will be extended just before the end of the project for 5 additional years (i.e. until June 2024).*

*The AMICI public website under the "Technology Infrastructure" tab ([http://eu-amici.eu/technology\\_infrastructure](http://eu-amici.eu/technology_infrastructure)), displays exhaustive descriptions of the Technological Facilities located at European AMICI partner institutes and available to collaborations with industry, including contact information. A search engine allows external potential users to quickly browse the list of Technical Platforms and to identify the most appropriate ones in accordance with their needs ([http://eu-amici.eu/technology\\_infrastructure/search](http://eu-amici.eu/technology_infrastructure/search)).*

*Communication includes dedicated pages on which future events are announced (<http://eu-amici.eu/events>) and recent scientific achievements or progress of AMICI activities are reported (<http://eu-amici.eu/news>). Outlines of these sections are available on the home page to facilitate browsing. A glossary (<http://eu-amici.eu/about/glossary>) that clarifies the meaning of terms used in the project is also available.*

*Finally, the "Industry Involvement" tab gives examples of successful collaborations between European Technological Facilities and industry ([http://eu-amici.eu/industry\\_involvement/success\\_stories](http://eu-amici.eu/industry_involvement/success_stories)). It also provides access ([http://eu-amici.eu/industry\\_involvement/tendering](http://eu-amici.eu/industry_involvement/tendering)) to the ongoing calls for tenders, including those below the EU publication threshold not advertised in the EU platform, via the collection of links to various national and institutional websites with searchable databases.*
